

CHANGE IN STANDARD MM-80 BULK UNITS EFFECTIVE October 1, 2007

In response to ongoing customer requests and feedback we are making a change in the way we package standard bulk units of our MM-80 Heavy Duty, Semi-Rigid Epoxy Joint Filler.

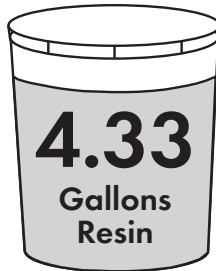

Traditionally bulks units were supplied as a convenience for applicators dispensing MM-80 through dual component pumps. But increasingly bulk units are being used by installers to mix multiple gallons by hand for dispensing through bulk caulking guns or through single component pumps.

Our new 5 Gallon Kit will permit easier portioning for manual dispense users and can still be used efficiently with dual component pumps.

NEW STANDARD 5 GALLON BULK MM-80 KIT

New Part #MMM8-5

FIVE GALLON PAIL

ONE GALLON CAN

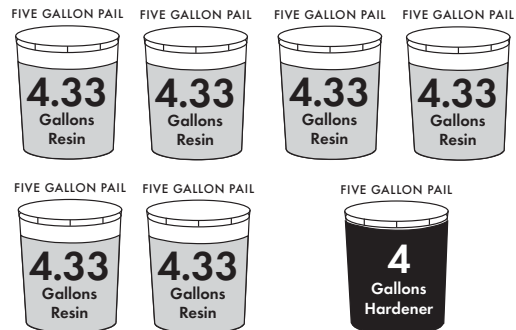

SPECIAL ORDER 30 GALLON BULK MM-80 KIT

Current Part #MMM8-30

For installers dispensing MM-80 through dual-component pumps, we will continue to manufacture 30 Gallon Bulk MM-80 Kits but will now do so on a special order basis. Please allow 3-4 working days for production of 30 gallon kits.

Note: 30 Gallon Bulk MM-80 Kits are composed of seven (7) pails as resin pails (Part A) are not fully filled to allow for easier pre-mixing/pouring.

5 Gallon or 30 Gallon Bulk MM-80 Kits will continue to be billed on a per gallon basis based upon standard volume pricing. Please contact us should you have further questions or feedback on this change. As always, we sincerely appreciate your support and your business.
